

## Statement from the 39<sup>th</sup> Annual Conference of the AUHF

We, the members of the African Union for Housing Finance, having met with colleagues from the public, private and NGO sectors from 21 countries over two days, and having held our 39th Annual General Meeting in Windhoek, Namibia, 31 October – 2 November 2023, express our renewed commitment to working together to address the crisis of affordable housing on the continent.

Over the last two days, we have focused our attention on the realities of affordable housing on the ground, and the numerous examples across Africa of projects and initiatives that are creatively and diligently working to bring access to affordable housing to low-income households. We shared real-world experiences of efforts to address the multiple hurdles facing this sector, such as constrained land markets, poor infrastructure, rapid urbanization, pervasive informality, limited affordability, persistent building material price inflation, and problematic tenure security.

The innovation present in the sector today takes many forms: alternative building materials, end-user financing, building refurbishment and design, public-private partnerships, product development for niche markets, community-focused project design, and leveraging technology to reach and serve target markets, amongst others.

Despite a highly complex market, limited resources, and insufficient enabling policy frameworks, there are clear opportunities in finance, investment, development, construction, and management of affordable housing. On the basis of our consultation and peer-learning, we renewed our commitment as practitioners in this field with regard to these important points:

- **Climate change and green building.** Given the impact of climate change, green building is not a nice-to-have, but a requirement in affordable housing projects, to ensure energy savings and sustainability over the life of the unit.
- **Data infrastructure.** All our planning, exploration, project design, targeting, investment decisions and policy development, depend upon a solid evidence base in order to be effective and efficient. Currently, available data in this sector is insufficient—often inaccessible, outdated, or not credible. Significant investment into research (on the part of governments in particular), data collection, analysis and maintenance is critical to the success of prospective projects and the sector’s future.

- **Community involvement on the ground.** Partnerships which include the communities themselves—in addition to government and the private sector—are the gold standard. Active, substantive community involvement in project design and implementation boosts the sustainability, impact, and success of projects. The AUHF, in partnership with its members CAHF, Shelter Afrique and African Development Bank, will embark on efforts geared towards creating a data platform that allows for housing data consolidation, analysis and dissemination. Part of these efforts will include development of standard templates to allow for easy data collection and comparison among states and institutions.
- **Sustainable Development Goals.** We appreciate that housing is an essential driver for achieving many of the Sustainable Development Goals. Housing projects and interventions will need to be structured to support the achievement of SDGs and form part of KPIs, especially the social components. While action in one area will affect outcomes in other areas as well, we must endeavor to identify and pursue specific SDGs and track progress.
- **Role of the state.** Across Africa, governments shape and pursue different roles in the affordable housing sector, ranging from construction and development of top structures, provision of an enabling policy and legal environment for private investment, capacity-building, and various tax incentives. The macroeconomic framework—for example, rates of government securities—is a significant determinant in the functionality of the housing market and its downward reach. Thus, the role of the state extends beyond ministries of housing and urban development, to the activities and policies of local government, central banks, and ministries of finance amongst others. Further work and dialogue is needed on the factors which impact on the effectiveness of government in its role in the affordable housing sector. Additionally, there is need for a clear understanding, on how policies, and other aspects such as the repo rate impact on the cost of borrowing, and overall housing affordability—this can be facilitated through a research study.
- **Non-mortgage finance.** Given the reality that mortgage markets across Africa are generally small and thin, achieving access to affordable housing is highly dependent on our ability to develop innovative finance products that respond to the practical constraints and needs of low income households (urban and rural), recognize households' risk appetite, and support household commitment and ingenuity—for example, credit mechanisms to enable incremental self-building. By segmenting the market, we can better understand needs, limitations and opportunities of borrowers.
- **Young African Professionals Platform.** Having involved students from the Namibia University of Science and Technology at this year's AUHF Conference, it is evident that there are areas to create synergy with academia not only in the conference-hosting country but also through an year-round program. The proposal was put forward to develop a Young African Professionals Platform that would aim to build capacity through knowledge-sharing, training, and research.
- **Case studies.** Following on this year's conference focus on case studies on the ground, the AUHF and CAHF will continue shining light on best practices from the content and beyond, picking up on some of the excellent projects presented at the sessions. We continue to call upon stakeholders in the housing space to collaborate on this in the spirit of Open Access to enhance learning through sharing of experiences, success stories and challenges faced.
- **Leveraging technology.** There are several aspects where the use of technology will promote the housing sector, including the actual building of homes, the provision of digital finance products, and data capturing. To encourage the leverage of these tools in the development of affordable housing finance, the AUHF will provide platforms for members to share and learn on these developments and opportunities.

In recognition of the innovation and excellence in the sector, pioneering organizations were honoured at the 1<sup>st</sup> Annual AUHF Housing Awards held on 31<sup>st</sup> October. We congratulate them on their excellent work and impactful projects:

- Green and Sustainable Affordable Housing Development - **Easy Housing Concepts**
- Affordable Housing Investor of the Year - **TAF Africa Global**
- Best Administrative Region in Which to Deliver Affordable Housing - **City of Kigali**
- Innovative Housing Public Private Partnership (PPP) - **Kenya Mortgage Refinance Company**
- Innovative Property Technology of the Year - **Citra- Live Different**
- Promising Emerging Affordable Housing Developer - **GulfCap Real Estate**

As decided at the AGM held 2 November, the 2024 AUHF Conference will be co-hosted with the International Secondary Mortgage Market Association (ISSMA) in October 2024 in Zanzibar, Tanzania. In the next year, the AUHF will focus on strengthening the data infrastructure for housing and housing finance across the continent, in partnership with CAHF. Furthering the conference engagement on the role of the state, the AUHF will explore the factors that impact on the determination of the most effective role of the state in the affordable housing sector, given local circumstances, fiscal framework, and nature of supply and demand in particular country housing markets. A roundtable session—similar to that held 30 October 2023 on the role of housing in the economy in Windhoek—will be held in Francophone Africa early in 2024. Finally, as part of its deepening partnership with the African Union Commission (AUC), the AUHF will also participate in the AUC’s upcoming Africa Urban Forum in 2024.

**Issued on 3 November 2023**

***AUHF Board of Directors:***

Mr Kehinde Ogundimu, CEO Nigeria Mortgage Finance Company (Chairperson)  
 Ms Mildred Mutesa, CEO Zambia National Building Society (Vice Chairperson)  
 Mr Johnston Oltetia, CEO Kenya Mortgage Refinance Company (Treasurer)  
 Mr Mfundo Mabaso, Growth Head, Affordable Housing, FNB South Africa (Secretary)  
 Ms May Abdel Hamid, CEO Social Mortgage and Housing Finance Fund, Egypt  
 Ms Pascaline Sefawe, Deputy CEO – Corporate Services, Botswana Housing Corporation  
 Mr Paul Jackson, CEO TUHF Pty Ltd, South Africa  
 Mr Samuel Akinin, CEO Atenu Developments, Namibia
